取决于膜片材质, 参见技术数据页

两位两通阀门 精密铸造 直通结构,适用于所有的国际标准的对焊接口  
两位两通阀门 铸造结构 直通结构, 适用于所有的国际标准的对焊接口  
隔膜取样  
T型阀门 例如用于无死区的环形管道  
用于不锈钢容器和罐  
多通道阀体 视用途而定

新一代隔膜阀

齐力公司在2021年对所有的隔膜阀进行了全面的技术升级, 升级后的设计更符合GMP/ASMEBPE, EHEDG以及3A的高洁净技术要求。

工作原理

手动或气动操作, 专门应用于制药工业中的卫生和无菌过程。该阀门非常适用于流体控制(开关)的任务, 膜片提供阀体密封和阀座密封。里面没有路径通到外部环境, 所以该阀门适用于无菌过程。当阀门关闭时, 支撑膜片的压力垫朝向阀体上的密封面移动, 当压力板移动时, 膜片弯曲, 被迫推向阀体中心的阀座区域, 因此关闭了通向阀体的流体路径, 阀体和压力板的相互关系, 防止了膜片的挤压。

技术参数

规格: 1/2"~2.5"; DN15-DN65  
压力: 10bar (145PSI)  
材质: 316L (CF3M)  
温度: -20°C~150°C  
连接: 卡箍, 焊接, 螺纹, 3A, BPM, DIN, SMS, IDF, ISO  
阀体结构: 直通、三通、U型三通、罐底阀、多通道隔膜阀  
膜片材料: EPDM+PTFE (双层) EPDM/Silicon/FPM(Vitong)  
认证: 3A-54-O2/1580

New generation diaphragm valve  
In 2021, Qili has carried out a comprehensive technical upgrade for all diaphragm valves. The upgraded design is more in line with the high clean technology requirements of GMP, ASMEBPE, EHEDG and 3A.

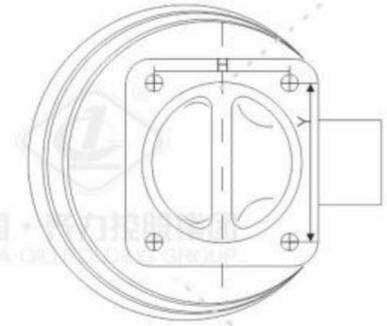

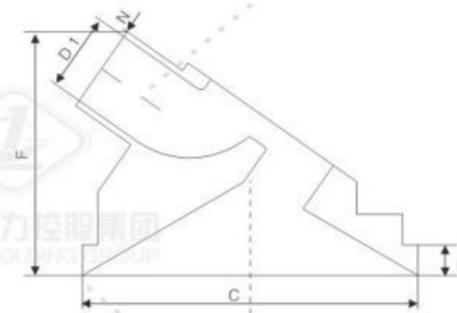

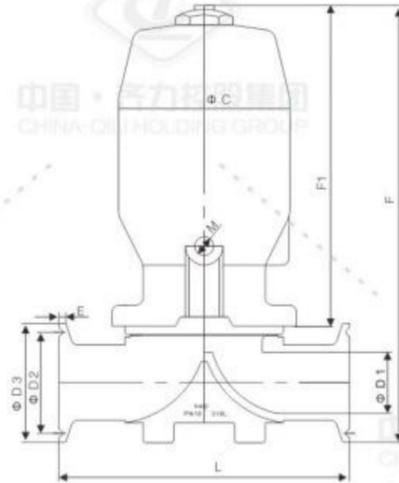

working principle

Manual or pneumatic operation, dedicated to hygienic and aseptic processes in the pharmaceutical industry. The valve is well suited for fluid control and switching tasks, the diaphragm provides body and seat sealing. There is no path inside to the outside environment, so the valve is suitable for aseptic processes. When the valve is closed, the pressure pad supporting the diaphragm moves towards the sealing surface on the valve body. When the pressure plate moves, the diaphragm flexes and is forced off the fluid path to the valve body, the mutual relationship of the valve body and the pressure plate, prevents extrusion of the diaphragm.

Technical Parameters

Size: 1/2"~2.5"; DN15-DN65  
Pressure: 10bar(145PSI)  
Material: 316L(CF3M)  
Applicable temperature: -20°C~150°C  
Connection method: Clamp welding thread 3A BPE DIN SMS IDF ISO  
Valve body structure: 2 way,3way,U-type 3way,tank bottom valve,Multi way diaphragm valve.  
Diaphragm material: EPDM+PTFE(double deck)/EPDM/Silicon/FPM(Vitong)  
Certification: 3A-54-O2/1580

隔膜阀适用于制药、生物、乳品、饮料、化工、化妆品、食品、电子等流体相关行业的流体控制系统。其优点在于使用无死角、无泄漏、易清洗、维护成本低、易操作等多项优点。可实现自控与手控，为降低企业运行成本提供良好的产品。45度安装时具有排放干净；阀内无泄漏风险；抗腐蚀性能高；粘度较高的物料容易通过可替代球阀、蝶阀对洁净度要求高的产品。

Diaphragm valves are suitable for fluid control systems in fluid-related industries such as pharmaceuticals, biology, dairy products, beverages, chemicals, cosmetics, food, and electronics. Its advantage lies in the use of no dead angle, no leakage, easy cleaning, low maintenance cost, easy operation and many other advantages. It can realize automatic control and manual control, and provide good products to reduce the operating cost of enterprises. It has clean discharge when installed at 45 degrees; there is no risk of leakage in the valve; high corrosion resistance; materials with high viscosity can easily pass through alternative ball valves and butterfly valves for cleanliness. Products with high requirements

罐底阀应用于生物制药，食品，精细化工等行业的配料容器放料使用，该阀结构在搅拌器开启时，底部物料能充分随水流搅拌均匀，与设备连接分为焊接式，法兰式两种。  
安装使用45度出料可使容器内物料排放干净，满足GMP要求，是管道卫生级洁净阀门。

The tank bottom valve is used in the batching container discharge of biopharmaceutical, food, fine chemical and other industries. When the agitator is turned on, the bottom material can be fully stirred evenly with the water flow. The connection with the equipment is divided into welding type and flange type. two kinds.  
The installation and use of 45-degree discharge can make the material in the container discharge cleanly, which meets the requirements of GMP. It is a sanitary clean valve for pipelines.

由具有改性的三元乙丙橡胶制造而成聚答物材料用高强度织造材料粘合以确保最大的强度和耐久性，使用了最新的硫化技术，提高了使用寿命更加长久，提高了可靠性。

Made of modified EPDM rubber, the polymer material is bonded with high strength woven materials to ensure maximum strength and durability. The latest vulcanization technology is used to improve the service life and reliability.

PTFE(+EPDM支持片)双层隔膜片是国际上使用于卫生隔膜阀门上的高标准隔膜片形式，是满足频繁使用SIP灭菌的生产工艺最可靠产品;广泛用于血液制品、疫苗、生物制药、大/小容量注射剂、无菌生产、发酵、注射用水供应及分配回路上等领域。

PTFE (+EPDM support sheet) double-layer diaphragm is a high-standard diaphragm form used internationally on sanitary diaphragm valves. It is the most reliable product that meets the production process of frequent use of SIP sterilization; it is widely used in blood products, vaccines, biological Pharmaceuticals, large/small volume injections, aseptic production, fermentation, water for injection supply and distribution circuits, etc.

双层隔膜片配的EPDM支持片,除了起着保护与产品接触的PTFE片的作用外,还能加强PTFE片的密封效果。PTFE隔膜片配上EPDM支持片一起使用,其可靠性及使用寿命都达到最佳水平。

The EPDM supporting sheet of the double-layer diaphragm can not only protect the PTFE sheet in contact with the product, but also strengthen the sealing effect of the PTFE sheet. The PTFE diaphragm is used together with the EPDM support sheet, and its reliability and service life have reached the best level.

U型一体式隔膜阀按生产工艺在管道上进行采样及做用水点使用，符合GPM要求，阀门安装在环形管道上使用，保证其用水点做到无死角。密封材料采用进口PTFE材料作为隔膜片，符合洁净要求。阀门采用限位装置保证其关闭时不会因用力过大损坏膜片。是目前生物制药厂广泛使用的阀门。

The U-shaped integrated diaphragm valve is used for sampling on the pipeline and as a water point according to the production process, which meets the requirements of GPM. The valve is installed on the circular pipeline to ensure that the water point has no dead angle. The sealing material adopts imported PTFE material as the diaphragm, which meets the cleanliness requirements. The valve adopts a limit device to ensure that the diaphragm will not be damaged due to excessive force when it is closed. It is a valve widely used in biopharmaceutical factories at present.

### 性能特点:

- 优异的耐蠕变和耐压性能
- 优异的热机械性能
- 优异的弯曲寿命
- 结构严密，无气孔
- 表面光滑不残留
- 突出的使用寿命

### Property features:

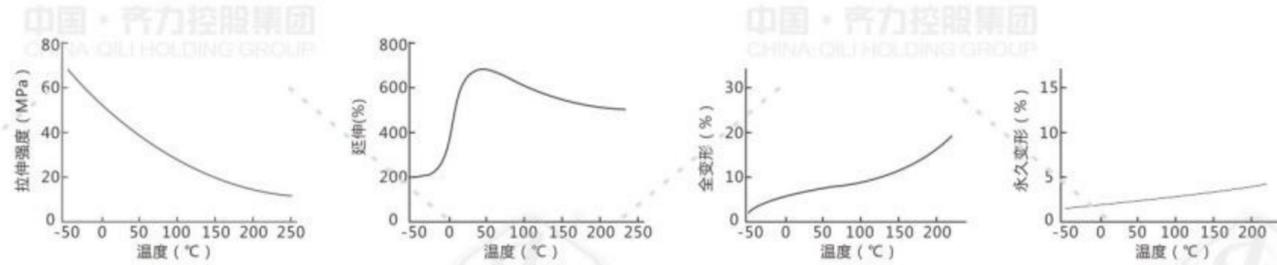

- Good anti-creep and pressure-resistant property
- Good thermal mechanical property
- Good flexing lifetime
- Tight structure, without air hole
- Smooth surface without residues
- Durable service lifetime

### 指标:

- 执行标准: FDA21CFR177.2600
- 工作温度: -120°C~150°C
- 工作压力: Max.0.6Mpa
- 设计寿命: 300,000次times/25°C
- 隔膜材料: PTFE
- 隔膜规格: DN8-DN125

### Index:

- Executive standard: FDA21CFR177.26
- Working temperature: -120°C~150°C
- Working pressure: Max.0.6Mpa
- Designed lifetime: >300,000次times/25°C
- Diaphragm material: new type : PTFE
- Diaphragm specification : DN8-DN125

### 隔膜阀单头消毒:
